GOBO ROTATION

The diagram illustrates the process of rotating the gobo. It is divided into two main sections. The left section shows two steps: Step 1 shows a hand using a screwdriver to remove a screw from the top of the gobo assembly. Step 2 shows the gobo being rotated around its vertical axis, indicated by a curved arrow. The right section shows the gobo rotation assembly, a circular plate with six gobo slots. The slots are labeled with part numbers: 084630/001, 084625/001, 084626/001, 084628/001, 084632/001, and 105115/802. The central part is labeled 'GOBO INDEX'. A small diagram shows a hand turning a handle to rotate the assembly.

COATED GLASS GOBOS TYPE 1

Diagram illustrating the correct orientation for Coated Glass Gobos Type 1. The gobo is shown with a lamp on the left. The gobo has a reflective side (indicated by a white arrow) and a grey/black side (indicated by a black arrow). The reflective side is labeled "Reflective side towards lamp" and the grey/black side is labeled "Grey/Black side away from lamp".

COATED GLASS GOBOS TYPE 2

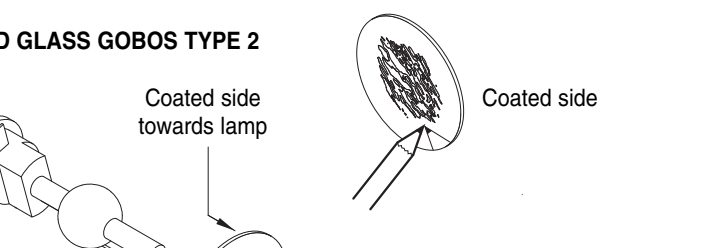

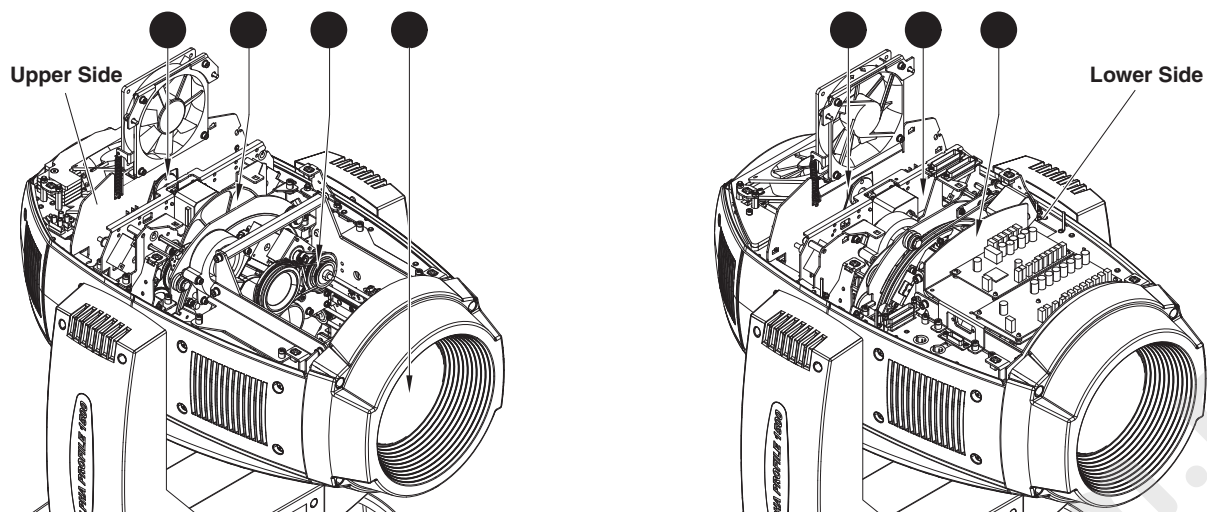

Diagram illustrating the correct orientation for Coated Glass Gobos Type 2. The gobo is shown with a lamp on the left. The gobo has a coated side (indicated by a white arrow) and an uncoated side (indicated by a black arrow). The coated side is labeled "Coated side towards lamp" and the uncoated side is labeled "Uncoated side".

To determine which side of a gobo is coated, hold an object up to it. On the uncoated side, there is a space between the object and its reflection.

Periodical cleaning - Fig. 22

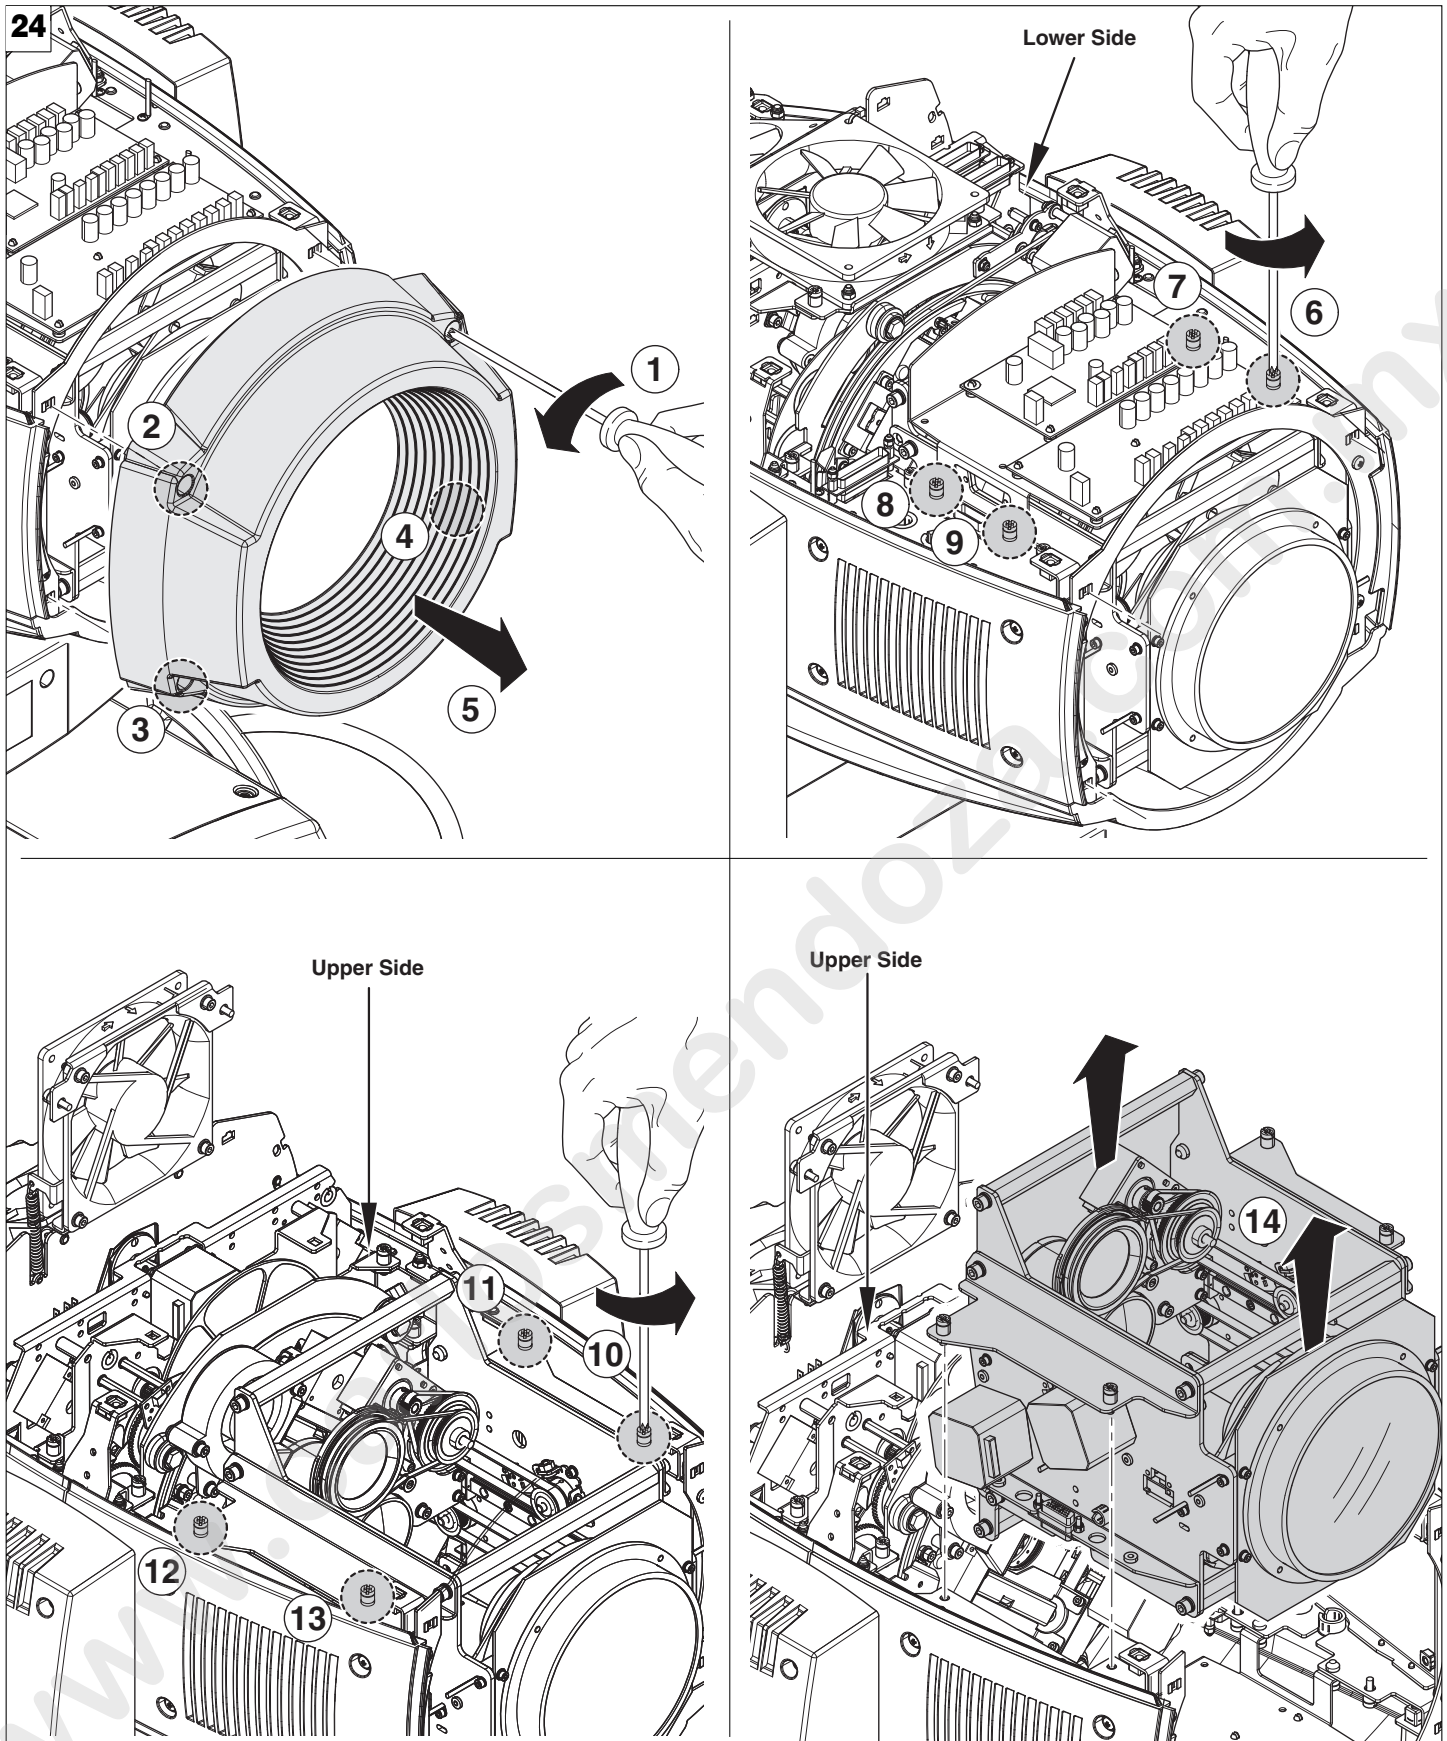

To ensure optimal operation and performance for a long time it is essential to periodically clean the parts subject to dust and grease deposits. The frequency with which the following operations are to be carried out depends on various factors, such as the amount of the effects and the quality of the working environment (air humidity, presence of dust, salinity, etc.).

Use a soft cloth dampened with any detergent liquid for cleaning glass to remove the dirt from the reflectors, from the lenses and filters. It is recommended that the projector undergoes an annual service by a qualified technician for special maintenance involving at least the following operations:

- General cleaning of internal parts.
- Restoring lubrication of all parts subject to friction, using lubricants specifically supplied by Clay Paky.
- General visual check of the internal components, cabling, mechanical parts, etc.
- Electrical, photometric and functional checks; eventual repairs.

Extraction of the effect modules: Preliminary operations - Fig. 23

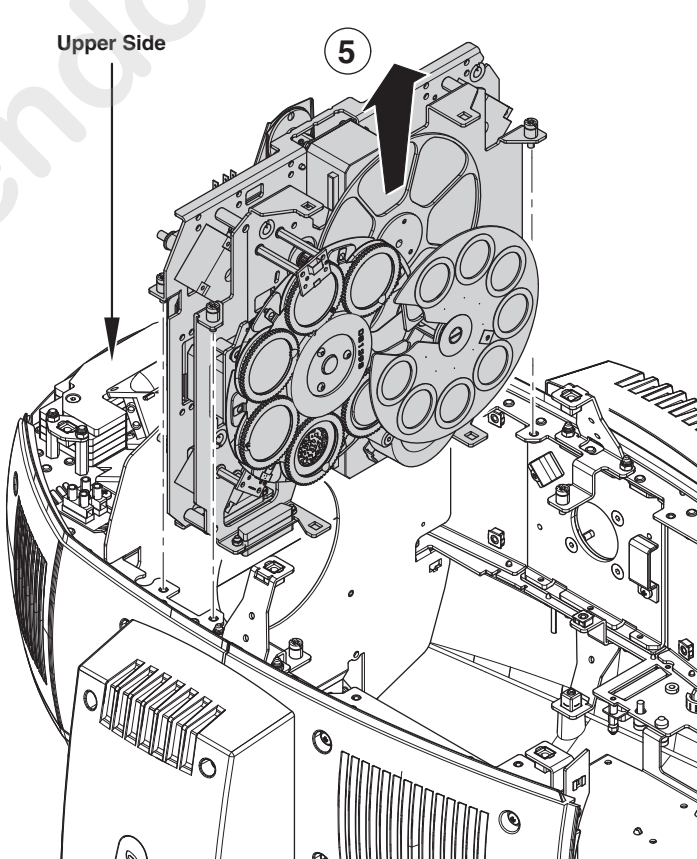

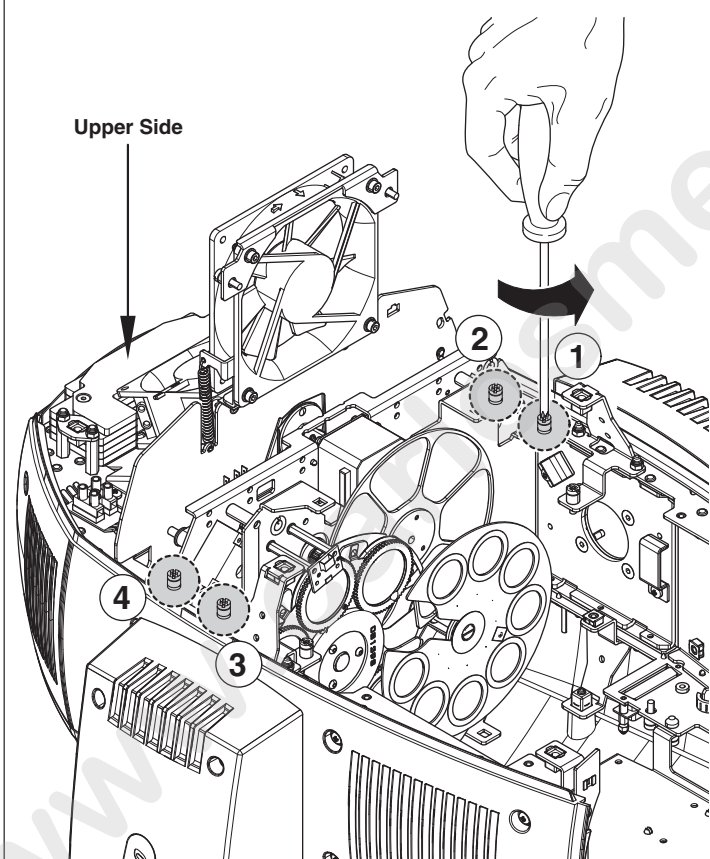

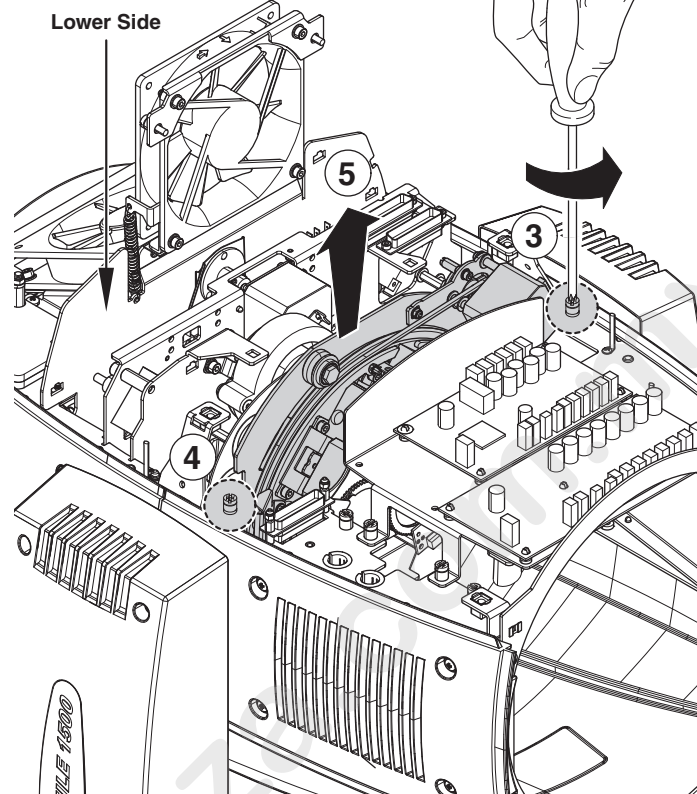

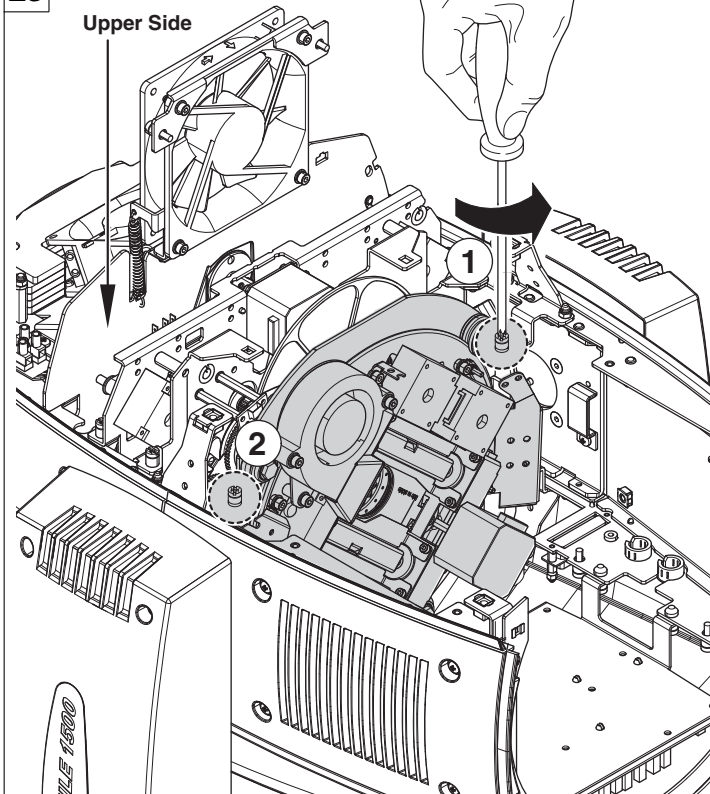

Extraction of the effect modules - Fig. 24

IMPORTANT: Grasp the modules using the support structure and not the details which could get damaged.

Insertion of the effect modules: Repeat the operations indicated in Fig. 24 and 25 in reverse order
